

ABSTRACT.

5     The present invention relates to an intake manifold or distributor for an air feed  
circuit for an internal-combustion engine comprising, on the one hand, an intake  
or plenum chamber of elongate shape and provided at one of its longitudinal ends  
with an intake aperture and, on the other hand, at least two pipes laterally  
connected to said chamber, said pipes extending at least partially around said  
10    intake chamber from their inlet apertures opening therein and having a curved  
structure over at least a portion of their length.

Manifold characterised in that it consists of two parts (6 and 7) produced by  
injection moulding of thermoplastic material and joined together in the region of  
15    peripheral joint zones located on a joining surface (8') crossing said manifold (1).
